

ROHAN SHINDE

Software Developer (Full-Stack)

☎ +91-9321506937 ✉ rohansnshinde05@gmail.com [in linkedin.com/in/rohan-shinde](https://www.linkedin.com/in/rohan-shinde) github.com/rohanshinde5

Summary

Software Developer with experience in full-stack development, having built multiple end-to-end web applications with RESTful APIs and database integration. Strong in problem-solving and focused on developing efficient, scalable, and user-centric solutions.

Skills

Programming Languages: C, Java, JavaScript [MERN], Python

Databases: MongoDB, MySQL

Core IT Subjects: Advanced Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Data Mining & Business Intelligence, Data Science using AI, Machine Learning

Tools/Platforms: GIT/GitHub, AWS, DevOps

Projects

AyurDarpan – Ayurvedic Lifestyle Recommendation Platform

Tech Stack: MongoDB, Express.js, React.js, Node.js, Machine Learning

April 2026

- Developed a full-stack MERN platform utilizing a deterministic 25-question matrix scoring algorithm to accurately calculate and map a user's dominant dosha across 7 distinct profile permutations.
- Integrated an ML-driven multi-label classification module to dynamically parse user profiles and deliver 100% personalized Ayurvedic remedies, recipes, and yoga routines.
- Engineered dynamic illness-based filtering using indexed MongoDB text searches, reducing database query execution time to under 50ms for complex remedy retrievals.
- Designed optimized relational B-tree schemas and RESTful API endpoints, reducing payload sizes by 35% to scale structured recommendation data delivery seamlessly[cite: 2].

DukanDaar – Smart ledger. Smarter limits. Built to eliminate bad debt.

Tech Stack: MongoDB, Express.js, React.js, Node.js, Python FastAPI, Tailwind CSS

June 2026

- Engineered a real-time ML credit guardrail that evaluates customer risk to enforce strict, multi-tiered credit ceilings (Rs.1,500 for High, Rs.5,000 for Medium, and Rs.10,000 for Low risk), effectively automating bad-debt mitigation at checkout.
- Optimized database write performance by 80% on high-frequency inventory updates by implementing a frontend Debounce Design Pattern with a 500ms window, pooling rapid stock changes into a single PUT request.
- Eliminated relational data corruption caused by cascade deletions by snapshotting product names (`item_name_snapshot`) inside transaction schemas, preserving 100% of historical invoice integrity[cite: 1].
- Built advanced data aggregation pipelines that filter out debt repayments (`is_repayment: true`) to populate a live dashboard with accurate, non-inflated 6-month sales trends[cite: 1].

Banker- Banking Management System

Tech Stack: Java, Swing, SQL

May 2025

- Developed a lightweight desktop banking application using Java Swing and MySQL, implementing role-based access control (RBAC) to isolate administrative and employee privileges.
- Designed normalized relational schemas with optimized foreign key indexing, handling simulated concurrent customer accounts and financial transaction records efficiently.
- Engineered ACID-compliant transaction routines for core banking operations (deposits, withdrawals), utilizing SQL transaction isolation levels to prevent data anomalies during concurrent operations.

Achievements

- Selected in Internal SIH-** Participated as a group and presented a National-level problem statement solution focused on travel infrastructure development for Kerala State [NATPAC].

Education

Bachelor of Engineering (Information Technology)

Aug. 2023 – May 2027 (Pursuing)

Datta Meghe College of Engineering, Airoli, Navi-Mumbai

CGPA: 8/10

Higher Secondary Certificate (Class-XII)

2023

Stream: Science

Percentage: 71%

Secondary School Certificate (Class-X)

2021

Schooling Completed

Percentage: 80%
